Intraday strategy using CPR and VWAP

I have took this training reg CPR strategy in 2021.

Since 2021 I am using this CPR and 90% I do only positional strategies.

Many of them asked me to explain intraday with less capital.

This required 50K.

This strategy will work 80% . If your view went wrong also you can exit with cost to cost or minimum loss.

As I said here we need to use two indicators

1.CPR

2.Vwap

I use Trading view plat form to watch charts.

I use 5 Mints time frame .

This is plain chart using CPR and VWap

In this CPR you can see R1 and Previous day High

S1 and Previuos day low.

These two levels are important .

Middle three lines are CPR levels.

Strategy 1 :- Market open near to R1 and Previous day high.

If market open near to R1 and Previous day high then 80% cases price will come to CPR levels and took support at CPR and form a W or M pattern near to CPR and trend.

CPR act as magnet to price.

If it form w pattern at CPR again it will touch day high.

If it form M pattern at CPR it will break CPR and trend continue to down wards .

If market open near to R1 and Previous day high see 5 mints candle which is trading below Vwap .

Next candle which breaks that previous 5 mints candle low take entry .

As a seller I don't prefer to buy naked so I deploy simple debit spread .

So I will buy ATM pe and sell Put near to CPR levels strike.

17-3-2023 (Yesterday)

Yesterday when price trading at R1 and Near to Previous day high and below Vwap .

Enter at 3rd candle .

Buy 17050 pe ATM

Sell 16900 pe CPR level strike.

If I see 1200 to 1500 rs profit for single lot .

Will make adjustment of that debit spread make loss free trade or exit .

Loss free nothing but If price come to 16950 or 16900 levels .

Will exit 17050 pe and buy 17000 pe . 50 points ITM so that debit spread will become loss free. You can hold.

For debit spread adjustments you can see my previous threads.

If your view or trade went wrong your loss is defined.

If price cross day high and hold you can sell one more lot 16900 pe and made 1:2 Put ratio .

As your view went wrong also you can exit the trade with no loss or Minimum loss.

It forms W pattern at CPR levels and trend started .

Startegy 2:- Market open near to S1 and Previous day low .

If market open near to S1 and Previous day low 80% cases price will come to CPR levels and took resistance at CPR or form a W or M pattern near to CPR and trend.

If it form M pattern again it will touch day low.

If it form W pattern it will break CPR and trend continue to Up wards .

If market open near to S1 and Previous day low see 5 mints candle which is trading above Vwap .

Next candle which breaks that previous candle high take entry.

So I will buy ATM ce and sell call near to CPR levels strike.

16-03-2023 (Thursday)

When price trading at S1 and Previous day low and above Vwap .

Enter at 10.10 AM candle .

Buy 16900 CE ATM

Sell 17050 ce CPR level strike.

If I see 1200 to 1500 rs profit for single lot . Will make adjustment of that debit spread make loss free trade or exit.

Loss free nothing but If price come to 16950 or 17000 levels.

Will exit 16900 ce and buy 16950 ce.50 points ITM so that debit spread will become loss free.

If your view or trade went wrong also your loss is defined .

If price cross day low and hold you can sell one more lot 17050 ce and made 1:2 call ratio as your view went wrong also you can exit the trade with no loss or Minimum loss.

It formed a M pattern at CPR and reversed.

CPR always act as a magnet .

As I said it has only 70 to 80% winning rate as I explained if we are in loss also how we can come out with no loss or minimum loss.

Who have 50k can try this intraday and made change as per your indicators and knowledge.

I paid almost 10k for this CPR knowledge but here i am sharing everything for free with some changes as per my knowledge .

Don't neglect this strategy it will work like anything.

If you are looking for positional strategies.

Here i explained almost 6 strategies . You can read and try .

Happy Learning and Keep growing🥰🥰🥰
