If your good at finding direction of market for current week with price action you can deploy like this strategy every week especially in nifty it is working too good.

This is for bullish view.

See range of Profit and Risk also.

This Strategy you can adjust easily :-

Case 1:- Market is moving in your direction don't do anything till market reach to your call sell position.

After market reach to your call sell position just buy 17850/17900 ce just to convert butterfly.

Case 2:-

Market is going opposite of your direction so kept double SL of your Put sold and exit or You can buy 17200 pe convert to debit spread or buy 17100 pe to convert credit spread so loss will be in control in put side then you can do lot of things now.

Case 3:-

If market sustain same level not moving any where so just to book profit in sell legs and move towards to spot.

This one i wont recommend because after come to near spot market move violent move you don't have scope to adjust.

Nifty we can play like anything if you have this many plans.

I shared all the strategies which i did in market and working also . Just make note and practice.

Happy learning ***.
